

# Seamless Integration with Unigraphics®!

**Multi-axis Verification  
NC Program Optimization  
Powerful Analysis Tools  
G-code Support**

The **Unigraphics-to-VERICUT Interface** from CGTech provides an easy & convenient way to verify:

- individual tool paths
- a series of selected tool paths
- a complete sequence of operations...

directly from within Unigraphics!

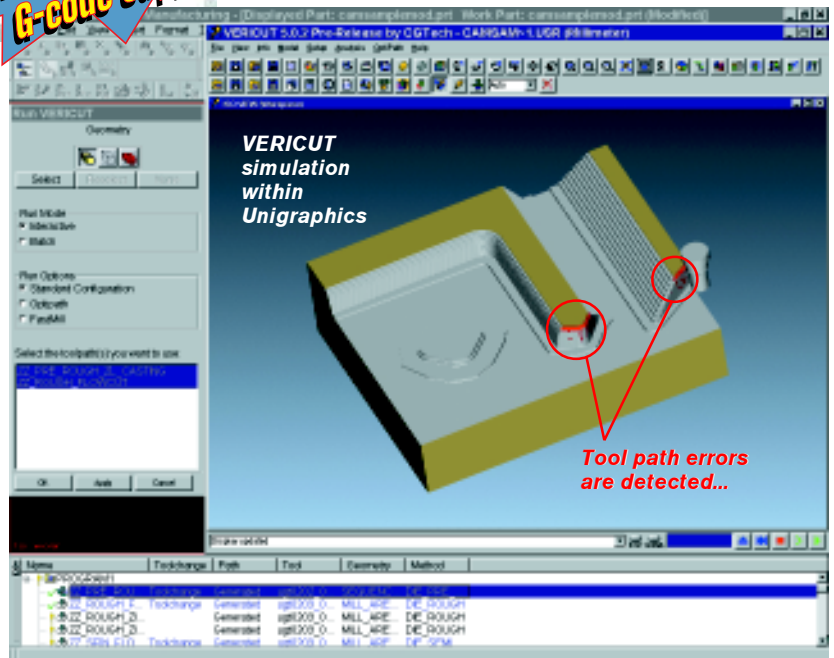

To launch VERICUT and verify tool paths within Unigraphics, simply select the desired operations from a list and press the Verification icon!

## Fast & Easy Set-up

With the Unigraphics Interface, tool path files are linked to manufacturing operations, enabling easy selection of tool path motion from the desired operation. All tool path and tooling information is automatically transferred to VERICUT. Design, Stock, and Fixture models are also automatically transferred to VERICUT in their proper orientation.

## Power & Flexibility

The VERICUT process runs external to Unigraphics so you can continue working in Unigraphics while verifying the tool path.
